

January 2021

The Keyboard Company Environmental Policy.

At The Keyboard Company, all Staff and Directors are keen to ensure that we are doing everything we can to limit our impact on the world around us.

As a Small/Medium Enterprise in the business of Electronics Distribution we are aware of the impact modern distribution systems and the Electronics business as a whole have on the environment and we are committed to playing our part in striving to improve on all aspects relating to the wider business where we can and to our 'in-house' actions at all times.

Key Points of our strategy are:

Minimise waste by evaluating operations and ensuring they are as efficient as possible.

Minimise toxic emissions by having no company cars and encouraging the employment of staff local to our premises. Apart from me, the MD, everyone lives within 5 miles of our office/warehouse.

Our people cycle and walk as often as they use vehicles.

Actively promote recycling both internally and amongst customers.

Electronic goods are a problem in themselves but we try to encourage our suppliers to use packaging that is less impactful on the environment.

Source and Promote a product range that will minimise the environmental impact of both production and distribution.

While our industry is difficult, we do always strive to ensure our product range is as long lasting as possible. We keep many spares of many makes and strive to encourage fixability and support the 'right to repair'.

Meet or exceed all the environmental legislation relevant to the company.

Source electricity from our local green supplier, Ecotricity and look to encourage our landlords to fit PV to our roofs. We do not heat the warehouse apart from the coldest of times and we run one 'Air Source' heat pump for the whole premises.

Signed By Bruce Whiting.
Managing Director.
